Facebook, Inc. is an American online social media and social networking service company based in Menlo Park, California. It was founded by Mark Zuckerberg, along with fellow Harvard College students since February 4, 2004; (15 years ago) and roommates Eduardo Saverin, Andrew McCollum, Dustin Moskovitz and Chris Hughes. It is considered one of the Big Four technology companies along with Amazon, Apple, and Google.[11][12]

Facebook claimed that had more than 2.3 billion monthly active users as of December 2018.[13] However, it faces a big problem of fake accounts. It caught 3 billion fake accounts in the 2019. Many critics questioned whether Facebook knows how many actual users it has.[15][16][14]

Facebook offers other products and services. It acquired Instagram, WhatsApp, Oculus, and GrokStyle[24]

Interns earn about $8,000 a month, and an entry-level software engineer earns $140,000 a year. Food is free. There is a walking path with local plants and a fresh bar.

Since the beginning of 2017 the spread of fake news began to gain intensity with the help of spam bots, a large number of users were sent unreal and sometimes even dangerous news, then the users themselves spread the news to their friends and this news acquired a mass character

fake news appears to have had an impact on the 2016 presidential election. [23] [24] The number of fake news repostings on Facebook exceeded the number of honest posts, due to the fact that the fakes were more in line with expectations or were more exciting[10][25][26][27].

Hillary Clinton became a Prime target of fake news during the 2016 presidential campaign. According to a survey conducted by Pew Research in December 2016, 64 % of American adults admitted that fake news caused "a lot of confusion" in their perceptions of current events, while 24 % said it caused "some confusion" and 11 % said that such reports "caused little or no confusion"[32]. In addition, 23 % of respondents admitted that they personally, consciously or not, participated in the dissemination of fake news.

Facebook was in no hurry to delete bot accounts until they were sued and Mark цукерберг spoke in Congress

December 2018: due to a bug, photos of 6.8 million users fell into the hands of third-party developers

A few weeks before the New year, Facebook reported another error. From 13 to 25 September 2018, a bug in the API allowed third-party app developers access to users ' personal photos. Some of the images were in the Stories section, while others were uploaded in drafts to a Facebook server without further publication. The bug affected users who used a Facebook login and allowed third-party apps to have access to their photos.

In the same time The New York Times has discovered that Facebook shares data with big companies

When there would seem to be no more scandals, the new York Times published an investigation that found Facebook shares users ' personal data with more than 150 companies – including key players Amazon, Microsoft, Netflix and Spotify.

Mark цукерберг spoke in Congress in the second time

I want to say fact that Each social network monitors the user but not every country/social network lets users know about it Facebook just couldn't hide it
